Education

Master at computer graphics - 1 year

2026 - Present, Madrid URJC

Computer engineering - 4 years

2022 - 2026, Zaragoza Unizar Eina

Electronic and automatic engineering - 2 years

2020-2022, Zaragoza Unizar Eina

Languages

Spanish - Native | English - C1 Anglia

Skills

Responsible	Vulkan, WebGL, Three.js
Pragmatic	C/C++, Go, Java, Haskell
Continuous learner	Bash, Linux, SysAdmin, SQL
Critical thinker	Svelte, Tailwind, ImGui, React

Projects

Real time SDF engine using sparse cache and physics sim

Q1, Q2 2026

Bachelor thesis at Unizar. Made with Vulkan, and ImGui. Hardware accelerated raytracing (RTX). XPBD physics sim with SDF constraints. Sparse brick set with custom generation and allocation. Dynamic scene and cache LOD. Deferred PBR pipeline with shadow rays and SDF based AO/SSAO. Hot reload slang shaders. Scene saving/loading to file. GUI with: logger, profiler, gizmo, scene tree, etc.

WebGL GLTF Pathtracer

Q3, Q4 2025

Developed in WebGL a physically based pathtracer with custom BVH, transient rendering and GLTF model and material support for the *Computer graphics* course at Unizar. Live demo available at: victorr.me/uni-rt.

Personal website - victorr.me

October 2025, July 2026

Interactive, desktop-like personal website built with Three.js and Svelte.

Multiplayer game for web/mobile

Q1, Q2 2025, Zaragoza Unizar Eina

Team leader of a 8-person group tasked with developing a Balatro-like cross-platform multiplayer game for web and mobile using Svelte, Flutter, and Gin-Gonic. See more on: github.com/UNIZAR-30226-2025-04

Microkernel

Q3, Q4 2024, Zaragoza Unizar Eina

Made a microkernel for the LPC2105 and NRF52480 microcontrollers with a working *simon says* demo in Keil and a dev board. Two person team made for university. Finished and published on my github
